Who am I?

I'm a Bilingual (English/French) Software Engineer with a strong foundation in backend development, API integration, and automation. With experience building and maintaining production systems using Python, C#, and JavaScript, I specialize in developing scalable backend solutions, RESTful APIs, and automated workflows. My work includes a company project where I implemented an AI-powered image processing pipeline that saved the company \$500,000 CAD annually, deploying containerized monitoring systems with Docker, and automating business processes through API integrations and Azure cloud services. I'm passionate about writing clean, efficient code and building robust systems that solve real-world problems. Currently pursuing a Master of Science in Computer Science (part-time) while seeking full-time opportunities to contribute to impactful software engineering projects.

WORK EXPERIENCE

DHL Express (Canada)

Brampton, Ontario, Canada

API Integration Engineer

Oct 2025 – Jan 2026

- **Business IT Support:** Manage inbound IT tickets from business customers on DHL platforms using ServiceNow, ensuring timely and accurate resolution of technical issues. Diagnose system problems, reproduce errors, and collaborate with engineers on escalated cases. Communicate bilingually (English/French) with customers to provide clear guidance and follow-ups. Develop lightweight scripts to streamline recurring ticket resolutions, improving efficiency and consistency.
- **API Integration Support:** Map and validate customer JSON payloads and API keys to internal schemas, ensuring proper routing and data integrity. Use Postman to test endpoints, run HTTP requests, and troubleshoot integration errors, collaborating with engineering teams for complex issues. Document recurring patterns and schema mismatches to support knowledge sharing and maintain integration quality across business customers.

Samuel, Son & Co.

Oakville, Ontario, Canada

Software Engineer

May 2024 – Sep 2024

- **Steel Material Verification:** Leveraged GPT-4o vision capabilities to automate the comparison of received steel material forms with purchase orders. This system ensured the steel vendor delivered the correct materials, leading to an annual savings of approximately \$500,000 CAD by reducing discrepancies and material waste.
 - **Implemented Monitoring System:** Set up a comprehensive monitoring system for warehouse machinery using Portainer and Docker to deploy InfluxDB, Telegraf, and Grafana. Telegraf connected to the company's MQTT broker, pushed data to an InfluxDB bucket, and sent it to Grafana. Designed customizable dashboards in Grafana displaying various machine metrics (pressure, temperature, etc.) Configured alerts to notify when metrics exceeded predefined thresholds, enhancing preventive maintenance and operational efficiency.
 - **Shopify Integration:** Utilized Webhooks to connect the company's Shopify storefront with backend systems, streamlining order processing. Implemented a scheduler using Azure Functions to automate the pulling and pushing of order data via the Shopify API. This integration improved operational efficiency and ensured timely data flow for order management.
-

TECHNICAL SKILLS

Programming Languages: Python (pandas, NumPy, matplotlib), C#, JavaScript, SQL, Rust, C, Racket, Java

Backend & API Development: RESTful APIs, API Integration & Testing (Postman), JSON Schema Mapping, Webhook Implementation, Azure Functions (Serverless), ETL & Data Pipelines, Database Design (SQL)

DevOps & Cloud Technologies: Docker & Containerization, Azure Cloud Services (Functions, Data Factory, Blob Storage, Data Lake), CI/CD Concepts, System Monitoring (Grafana, InfluxDB, Telegraf)

Software Engineering Practices: Object-Oriented Programming, Design Patterns, Automated Testing, Version Control (Git), Debugging & Troubleshooting, Documentation, Agile Methodologies

EDUCATION

University of Waterloo, Bachelor of Mathematics (BMath)

Waterloo, Ontario, Canada

Sep 2021 – Aug 2025 [Full-time]

University of Colorado Boulder, Master of Science in Computer Science (MS-CS)

Online (US)

Jan 2026 – Jan 2029 [Part-time]

CERTIFICATIONS

- Microsoft DP-900 – Azure Data Fundamentals
 - Google IT Automation with Python Specialization – Coursera
-
